Enter Section of Platform to be Revised	Revise and Amend Section 2 Health Care Freedom

### Health Care Freedom

Every Missouri citizen should have the right to choose and the right to refuse unwanted medical treatment. The doctor-patient relationship is sacrosanct and should be free from interference from the federal, state, and local government as well as any other public or private institution or agent. Every Missouri citizen should be treated equally with respect and dignity regardless of age, race, color, gender, or financial status.

Therefore, the Missouri Republican Party Supports:

- Allowing every Missourian the right to refuse medical treatments, procedures, and/or interventions upon his or her person
- Prohibiting the state and any political subdivision of the state, including local health department, health board, schools, and institutions of higher education from passing or implementing any law, order, ordinance, regulation, or public policy, guideline, or recommendation that mandates, coerces, or infringes upon the individual right to refuse any treatment, technology, testing, facial coverings, medical devices and/or procedures, including but not limited to injections and vaccines
- Protecting Missouri citizens' right to be informed about exposure to any agent, therapy, technology, or treatment, including but not limited to mRNA and/or gene-altering therapies, and medical technologies or treatments when such agents have risks that lend themselves to the need for informed consent.
- Aggressive investigation into any substantive consumer fraud of pharmaceutical companies who deceived Missouri citizens about the efficacy and the safety of COVID-19 and mRNA vaccinations.
- Aggressive investigation into any substantive allegation of any entities, organizations, or agents (including but not limited to state or local health departments, state medical boards, and schools) that succumb to fear-based tactics to silence, threaten, harass, financially disincentive, or harm any agent or organization that practices a professional duty of questioning or criticizing vaccine or gene modifying mRNA agents or any other agent even if it directly challenges the policies and laws being implemented.
